Warning!

Please check the shower floor for defects, damage or blemishes BEFORE beginning installation.

Installation=Acceptance

The standard protective film is only used for protection during transport/storage and must be removed before installing of the shower floor, so that this can be checked completely

During the works, make sure there is adequate protection (Tetra, cardboard or plastic cover film) on the shower floor, so that it cannot be damaged by dropped tools, tiles, etc. , or splashes of adhesive, primers, etc.

1

Unpack the shower floor with caution.

2

Remove the protective film and check the shower floor.

3

Protect the shower floor with cardboard or tetra.

4

Start the installation of the shower floor.

1. Installation on existing floor, against tiles or Repeat Materials wall panels
